Pollution is becoming one of the main concerns of the modern world nowadays.

Alukon as a part of the society and environment feels the responsibility to decrease negative impact on planets ecology and create better tomorrow. Environmental awareness is one of our core values which means that we want to contribute for further generations.

Starting from saving paper by printing less and installing LED lighting and up to delivering renewable and passive house standard projects, using recyclable materials, offering Cradle-to-Cradle products, using eco-friendly powder coating instead of paint Alukon takes every opportunity to be more energy efficient company.

We demand our suppliers and subcontractors to follow the same environmental policy.

Alukon`s environmental policy is:

- Comply with all environmental legislation which is focused to promote improvement in this area;
- Participation in the environmental events;
- Our production processes, technological equipment and working environment are constantly being improved in order to minimize and eliminate any negative impact on the environment;
- Reduce, sort and recycle production waste;
- Consistently streamlining both the Company`s environmental activities and its management system;
- Increasing the efficiency of non-renewable natural resources and non-renewable energy resources utilization;
- Continuously improving labor and process safety at its production facilities and ensuring that working conditions meet the requirements of safety and hygiene standards;
- Increasing the efficiency of non-renewable natural resources and non-renewable energy resources utilization;
- Considering environmental factors during the development of a procurement policy and provision of work and services by contractors;

- Motivation of personnel in order to use every employees creative potential in the process of resource conservation and environmental risk reduction;

Actions taken to reach, maintain and improve environmental policy goals:

- Environmental matters integration in overall business processes.
- Complying with legal requirements defined by local authorities.
- Determination and control of work environment aspects, that way decreasing potential environmental trace appearance by controlling used energy, materials and recyclable waste.
- Increasing use of recycled materials.
- Improving knowledge of environmental management and creating positive attitude for employees in environmental goals fulfillment.
- Constant training of personnel in environmental management.

Each member of a company is being introduced to company`s environmental policy, algorithms and procedures that are used to reach environmental policy goals.
